He is able to trace the successive degradation of the radium atom through at least six diverse stages, each produced by a loss of a definite number of electrons, until at length, as he believes, it ends as an atom of lead--one of the commonest and least active of metals. This is very different from the alchemist's dream of the transmutation of lead into gold, but it is at least as epoch-making a discovery. Only those who have studied the matter closely can appreciate the wonderful triumphs of manipulation and reasoning which have thus enabled our physicists to get inside the atom, and trace the motions of the infinitely small electrons which compose it. We are on the threshold of a complete revolution in...
