The Manhattan Project: big science and the atom bomb

By Hughes, Jeff

Icon Books, 2003 9781840465044, 2003. Soft cover. Book Condition: New. NEW paperback. 170 pages. Illustrated in b/w. "Established in 1942 at the height of the Second World War, the Manhattan Project was a dramatic quest to beat the Nazis to a deadly goal: the atomic bomb. A vast and secret 'state within a state', the Manhattan Project cost \$2 billion. With science's rise in prestige, state funds began to flow into science as never before, leading to the creation of huge research institutes which represented a new form of scientific organisation: 'Big Science'. Yet 'Big Science' has a history that long pre-dates the advent of the atom bomb. Arguing that the Manhattan Project both drew on and accelerated a trend already well underway, Jeff Hughes offers a lively reinterpretation of the key elements in the history and mythology of twentieth-century science." Described by the Tomes as "pacy and concise".
